

Discovery Geo

Do you know where your company assets are?

Most asset losses occur after few handovers.
You can keep track of all those expensive assets that are used on the field, have recent photos , location, depreciation and all what you need.

Do you know who is responsible right now of every costly asset in your company?

Secure the assets of your company and avoid millionaire losses.

Discovery Geo

MANAGE AND CONTROL YOUR FIXED AND TECHNOLOGICAL ASSETS

Discovery GEO uses an app for the people on the field and a web application for the managers. Uses bar Codes, QRs or unique IDs to identify the assets and simple processes and interfaces to keep a match to one responsible and its location.

The APP-Geo helps building verification inventories and reporting each asset assignment, movement or change of status (life cycle). Also, the accountant gets information like cost, evidence of deterioration (photos), among others.

EVIDENCE

Each inventory can collect evidence of what have changed. From the **APP-GEO,** each inventory taken or news of It is registered with the date, time and user in charge. Add photos of assets, report damage or deterioration, coordinates of location, signature of the responsible. locate each item within plans or maps of buildings and facilities.

AUTHENTICATION

Managers authenticated with Users and keys assigned to report online from their Android Smartphones.

QRS, BARCODES

Converts the cell phone camera into a reader codes as best practice for collect plate, serial and code data identification.

PHOTOGRAPHIC RECORD

Record evidence of strategic data as serial numbers on plates, data or values of meters or dashboards, results of installations, modifications, maintenance, parts changes, and any other novelty that is justified with photographic evidence.

GEOLOCATION

Registration of the coordinates of GPS location as part of the report online.

SIGNATURE CAPTURE

Registration of acceptance signatures and / or compliance of inventories detected and assigned, to accompany reports of resumes or certificates of delivery.

LOCATION IN PLANS

Mark the location of your assets in floor plans, offices, camps, etc.

LOCATE YOUR VALUABLE ASSETS

When assets are moved, the responsible may register the change through **the APP-GEO,** selecting the new location from the locations list, point the are in the location map and add the gps coordinates delivered bay the phone.

ONLINE REPORTING WEB APPLICATION

All the information is collected in a database, processed and reported to the authorized personal through a web application.

Find out about:

01 Last location reported

02 Movements of your assets

04 Entry of new Items movements and casualties

03 State changes (Lifecycle)

05 Changes of responsible (assignments)

06 Impairment levels (photographic evidence)

REPORTING MODULE

Get accurate information with consolidated and specific reports. You can use the report list default or design any new report format that required, by different criteria as:

- Reports for each location
- Types of assets, brands or models
- By responsible users
- Certificates generated
- By states (warehouse, assigned, transit, reserved, production, low, maintenance, among others)
- Reports with photographic evidence
- Assets resumes

These reports can be consulted in the interfaces of each user administrator, or exported to Excel, PDF, Word, Html. also can generate statistical graphs.

HANDOVER

Control for delivery of inventories in shift changes

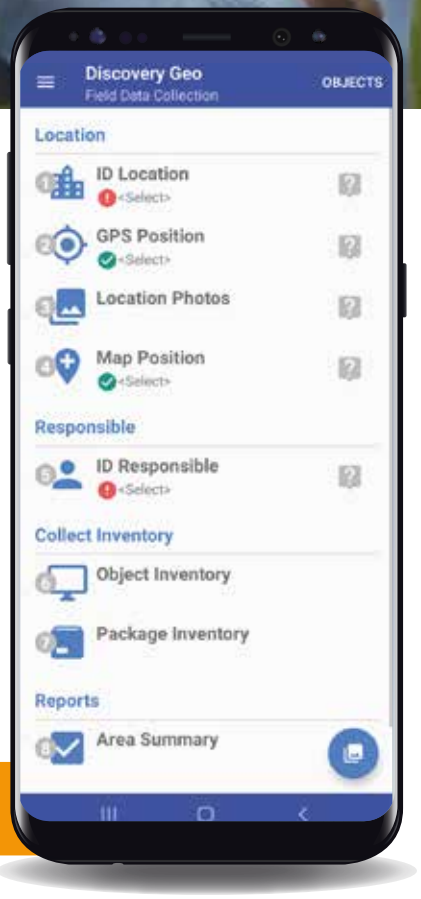

During the hand over, allows the new responsible to **read the QRs or barcodes of the assets to be received.** Then, the app compares the list of the assets found with the previous list of assets and creates a report that should be signed by the two parties. Copy of the report and differences are maintain in the database for later consultation.

Discovery GEO generates a final report of reconciliation to certify delivery.

SYSTEM COMPONENTS

Installs on Android phones or tablets with a camera 5mp (or higher). The system syncs with the Server equipment to deliver your inventory data or synchronize modifications in the configuration, either by the corporate network (Wifi) or through a plan of operator data.

APP-GEO

DISCOVERY GEO APP:

Installs on a working physical or virtual machine as Server (Windows 8 or higher) and allows the receipt and consolidation of inventories, to then deliver information to all system administrators according to your profile.

Benefits:

1. **Discovery GEO** allows you to carry a complete control of your fixed assets via Android phone or tablet which reduces costs in infrastructure for capture and control.

2. Agility in capturing information of the asset since it uses the information in barcodes or QRs that identify fixed assets.

3. Those in charge of auditing assets and support groups will be able to view graphically the affected element and its environment, thanks to the relationship of the object with its location on map charts and buildings plans.

4. The lifting campaigns of information can now be accompanied of "**Graphic Evidence**" of the visit in site thanks to the photo association of the elements and their location, as well identify yourself through GPS coordinates of each area.

5. Data Synchronization with the database Discovery data is done from easily over the Internet using cell phones connected to Wifi or data plan.

6. The application can be used without internet connection for survey of new assets.
